

Product | New CT2500 ColorTrans Mounting Film Permanent/Self-Wetting Removable

Self-Wetting

PERMACOLOR® ColorTrans™ CT2500 delivers affordable transparent mounting that's clearly superior and easy to apply!

Introducing: **ColorTrans™ CT2500** Optically Clear Permanent / Self-wetting Removable, 2nd Surface Mounting Film

What is ColorTrans CT2500?

This all new optically clear 2-side mounting film is a 2.0-mil clear polyester film coated on one side with an aggressive Permanent clear acrylic PS adhesive and on the other side with a unique removable self-wetting clear silicone PS adhesive for dry applications.

CT2500 is for back-mounting transparencies to glass windows, Plexiglas® or other transparent substrates for both indoor and outdoor applications.

Why CT2500 exceeds your expectations:

ColorTrans CT2500 utilizes the next generation of silicone removable, self-wetting adhesive!

- The new generation removable adhesive makes dry applications easy and perfect without air-egress channels which results in a hazy image.
- The removable side is wound out for ease of application.
- To eliminate confusion, the removable side has a smooth white film release liner.
- The Permanent side has a clear smooth PET release liner.
- The two film liners insures a perfectly smooth adhesive which results in an optically clear application.
- UV protection is built into the two adhesive layers, resulting in better images...longer for both interior and exterior applications.

Product Part #	Roll Size	Carrier	Permanent Adhesive	Removable Adhesive	Outdoor Durability
CT2554W54L150	54" x 150'	2.0-mil Clear PET	Clear Acrylic	Self-wetting Silicone	Up to 3 years
