Piggyback Label Stocks

Roll Label

PSA-coated papers and films in roll-to-roll and roll-to-fanfold form. Extensive product options, available customization, varying roll lengths and widths, and customer friendly services, like our Mactac PreciseSM Program, which offers next-day shipping on a precise amount of material needed for small runs and limited applications.

www.mactac.com/rolllabel

Mactac[®] offers an extensive line of piggyback or label-on-label products for Flexo, Thermal Transfer, Direct Thermal and Impact printing. Piggyback products are uniquely designed to ensure the middle ply can be permanently applied to a substrate, while simultaneously allowing removal and alternate placement of the top label.

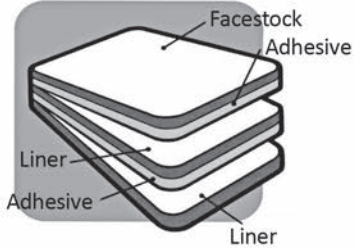

They are used for barcode and human readable labels in Retail, Warehousing, Healthcare and Industrial markets, and typical applications, include: Inventory, Shipping, Office Label forms, Medical Records, Direct Mailers and Lottery / Sweepstakes labels.

Additionally, Mactac's Copylabel and Copyback[®] products are also part of this comprehensive product line.

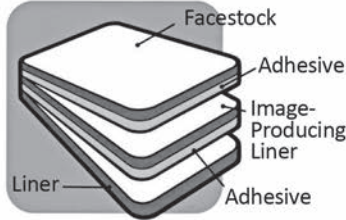

Copylabel is a piggyback construction with an image-producing middle ply liner. Copyback is a non-piggyback construction that offers a label stock with an image-producing liner. The image liner creates a carbon copy of the image on the top label. Copylabel and Copyback are intended for hand-writing or impact printing.
